

## **Assignment 2 – Part 2**

### ***Description***

In this project we will implement a demo for a linear interpolation in one line using the techniques seen in class.

### ***What to do:***

Implement the new function defined in *DrawLine.h* and *DrawTriangle.h* aimed to draw a line and a triangle using linear and bilinear interpolation respectively.

### ***Submission Guidelines***

You don't need to upload the assignment yet; you will only submit the full assignment 3, once we have implemented the three parts.

### ***Additional guidelines***

You have available in Moodle the following files:

- "*Code guidelines.pdf*": a complete file detailing different aspects of the code etiquette I expect you to follow.
- "*FileHeaderSample.h*": example of a complete and correct header for two functions and a file.
- "*README\_template.txt*": template of the readme file you have to include in your submission.
